JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volume 112, Numbers 1–2, 30 November 1999

Contents

D. Laurie and R. Cools
Foreword 1

B. Bialecki and P. Keast
A sinc quadrature subroutine for Cauchy principal value integrals 3

R. Cools
Monomial cubature rules since "Stroud": a compilation — part 2 21

E. de Doncker, A. Gupta and R.R. Zanny
Large-scale parallel numerical integration 29

K. Diethelm
A method for the practical evaluation of the Hilbert transform on the real line 45

G.A. Evans and J.R. Webster
A comparison of some methods for the evaluation of highly oscillatory integrals 55

A. Genz and J. Monahan
A stochastic algorithm for high-dimensional integrals over unbounded regions with Gaussian weight 71

B. Griener and H.J. Schmid
An interactive tool to visualize common zeros of two-dimensional polynomials 83

S. Heo and Y. Xu
Constructing cubature formulae for spheres and balls 95

M. Hill and I. Robinson
d2lri: A nonadaptive algorithm for two-dimensional cubature 121

T.N. Langtry
Lattice rules of minimal and maximal rank with good figures of merit 147

D.P. Laurie
Accurate recovery of recursion coefficients from Gaussian quadrature formulas 165

D. Levin
Stable integration rules with scattered integration points 181

J.N. Lyness and L.M. Delves
On the implementation of a modified Sag–Szekeres quadrature method 189

G. Monegato and L. Scuderi
Numerical integration of functions with boundary singularities 201

E. Novak, K. Ritter, R. Schmitt and A. Steinbauer
On an interpolatory method for high dimensional integration 215

T. Ooura and M. Mori
A robust double exponential formula for Fourier-type integrals 229

T.N.L. Patterson
Stratified nested and related quadrature rules 243

K. Petras
On the computation of the Gauss–Legendre quadrature formula with a given precision 253

A. Sidi
Further convergence and stability results for the generalized Richardson extrapolation process GREP$^{(1)}$ with an application to the $D^{(1)}$-transformation for infinite integrals 269

K. Singstad and T.O. Espelid
Integrating composed singularities using nonuniform subdivision and extrapolation 291
